

HUMAN BALL

DESCRIPTION

Human BALL is the only seat that helps stabilize and engage your entire body. We like to say that while computers have made us sit all day, we've found a way to make sitting a workout.

That's why we designed the new Human Ball, which automatically self-centers and stays in place.

This encourages users to maintain an active, correct posture, correcting the imbalances that often result from the positions we adopt in regular office chairs.

TECHNICAL FEATURES

Using the advanced 3D Evolution rotational molding technology, we've developed a ball with a dual-density material in a single piece. This design ensures the ball remains stable at the bottom and more comfortable at the top, naturally self-centering.

The Human Ball and all its components are proudly made in Italy, following eco-friendly Green Factory standards. Our careful production process guarantees that the Human Ball meets all safety requirements and stands out for its unique quality and eye-catching design.

After comparing it with other products on the market, we can confidently say the Human Ball is the only 100% Made in Italy option. Each unit undergoes strict quality control before being deflated and hand-folded.

Cover fabric: hypoallergenic, antibacterial, self-extinguishing.

The ball is made from a cross-linked compound, making it resistant to accidental punctures.

Dual density.

Free of phthalates and latex (harmful to health).

Certified with BRQ ("Burst Resistant Quality").

PVC-Vinyl material certification (environmentally friendly, no air pollution).

Produced in compliance with European safety regulations 91/338/EC and 89/677/EC regarding cadmium and lead content levels.

Made in Italy.

TECHNICAL SPECIFICATIONS

Dimensions	55 cm
Weight	2,10 kg
Maximum user weight	180 kg
